

Find the position. Type the letter.

Korean 2-set keyboard / QWERTY key labels shown for reference

Start small

1. Home keys: ㅓ ㅑ ㅓ ㅕ / ㅗ ㅛ ㅜ ㅡ . Add the other rows later.
2. Key positions, not romanization: R + K makes 가; S + K makes 나.
3. Shift selects ㅗ ㅛ ㅜ ㅡ / ㅏ ㅑ ㅓ ㅕ . Caps Lock is not needed.
4. In the app, use physical keys, tap the screen, or use your own Korean input.

A five-minute routine

Look at two keys. Copy each letter slowly.

Cover the labels and type from memory. Check one thing, then repeat tomorrow.

For everyday messages, add Korean input in your device settings.

Shift: Q ㅏ W ㅑ E ㅓ R ㅕ T ㅗ O ㅛ P ㅜ

Different labels. Same positions.

Reference examples for the app's physical-key practice mode

French AZERTY reference

German QWERTZ reference

These diagrams show common reference labels, not every regional variant.

The app reads physical key positions. A printed A at the QWERTY Q position still produces ㅏ in the app's physical-key mode.

Choose your reference in More options, or use automatic labels if supported.

With a real system Korean input method, follow that method's active layout.

Cut-out Korean key labels

Print at 100% / Actual size. Test on paper before using adhesive label stock.

14 mm squares / includes the seven Shift letters

Before sticking

1. Check the square size against your keys. Print scaling changes the label size.
2. Cut one square and test it. Do not cover key travel gaps or indicator lights.
3. Letters in orange show Shift. Place by position; Latin labels are references.
4. You can simply keep the full keyboard chart beside your monitor instead.

Scale check: the line below must measure 50 mm.
